

Vinay Venugopal

Full-Stack .NET Developer

+91-9497653414 · vinaykolangara@gmail.com · linkedin.com/in/vinay-venugopal-79574383 · Thrissur, Kerala, India

PROFILE

Detail-oriented Full-Stack .NET Developer with 4+ years of experience delivering scalable APIs, MVC web applications, and end-to-end solutions across logistics, postal services, e-commerce, healthcare insurance, and car rental platforms. Proven ability to collaborate directly with clients through the full development life cycle — from requirements analysis to production deployment. Known for clean architecture, strong problem-solving, and a proactive approach to learning modern front-end technologies.

TECHNICAL SKILLS

Backend	ASP.NET Core (MVC & Web API) · .NET Core 2.1–8.0 · Entity Framework · LINQ · REST API Design
Frontend	HTML5 · CSS3 · JavaScript (ES6+) · Bootstrap · Blazor Server
Database	SQL Server · Stored Procedures · Query Optimisation · MongoDB
Tools	Git · Agile/Scrum · Schedulers & Background Services · External Integrations
Soft Skills	Client Communication · Team Leadership · Event Coordination · Adaptability

WORK EXPERIENCE

Software Engineer

November 2021 – Present

Vofox Solutions Pvt. Ltd. · Kochi, Kerala

- Designed and developed robust RESTful APIs and MVC web applications using ASP.NET Core, serving clients in postal services, logistics, e-commerce, and healthcare.
- Collaborated directly with international clients (Qatar Post) for requirement analysis, sprint planning, feature delivery, and UAT — managing end-to-end ownership of multiple modules.
- Built and maintained admin panels, scheduling services, and external data-sync integrations to support operational workflows.
- Led development of Blazor Server applications (Quantum, Turo Wiki) using .NET 8 Preview, delivering full car rental management platforms.
- Contributed to team leadership and coordination as a Central Committee member, planning company events and managing cross-team communication.
- Actively expanding front-end skills into modern JavaScript frameworks to complement full-stack capabilities.

KEY PROJECTS

Money Transfer Application (Qatar Post)

Technologies: ASP.NET Core MVC/API · SQL Server · UPI Payment API Integration

- Developed a cross-border money transfer system enabling Qatar Post branches to transfer funds directly to UPI IDs in India, integrating with third-party UPI payment APIs for real-time transaction processing.
- Built the MVC application with modules for money transfer initiation, exchange rate management, rate syncing, discount management, and approved UPI handle validation.
- Implemented comprehensive reporting features including branch-wise and consolidated transaction reports, and customer-level reports for audit and operations.
- Developed role management functionality to control branch-level access and permissions across the platform.

Qatar Post – Digital Services Suite

Technologies: ASP.NET Core MVC/API · SQL Server

- Built QPostService and QPostAdmin APIs powering Qatar Post’s mobile and web applications — covering parcel tracking, shipment management, and customer/business workflows.
- Implemented Sandooqi SmartBox: a secure package delivery system with customer, driver, and admin-facing modules.
- Developed Operational Mobility platform for postal employees — Track & Trace, Item Reception, Dispatch, Storage, and e-POD with full admin configuration.
- Created QPWhatsAppExService enabling employees to apply for leave and managers to approve/manage records via WhatsApp integration.

Connected Customer & Warehouse Portal

Technologies: ASP.NET Core MVC/API · SQL Server

- Developed backend APIs for customer portals, warehouse portals, and a mobile app backed by an admin application.
- Built the Connected Application system to manage shipping for purchases from international merchants, including a payment module and warehouse operations.

Quantum & Turo Wiki

Technologies: Blazor Server · .NET 8 Preview · SQL Server

- Built Quantum, a full car rental management platform with rental workflows, vehicle listings, gallery, and admin panels — working directly under client.
- Developed Turo Wiki as a structured knowledge base for Turo car rental information.

Insurance Questionnaire & Providers Portal

Technologies: ASP.NET Core 2.1 / 6.0 · SQL Server · HTML · CSS · JS

- Created dynamic HTML questionnaire forms for insurance with an agent customisation panel for personalising questionnaires.
- Contributed to an ongoing medical Providers Portal for healthcare insurance providers.

Money Transfer Application (Qatar Post)

Technologies: ASP.NET Core MVC/API · SQL Server · UPI Payment API Integration

- Developed a cross-border money transfer system enabling Qatar Post branches to transfer funds directly to UPI IDs in India, integrating with third-party UPI payment APIs for real-time transaction processing.
- Built the MVC application with modules for money transfer initiation, exchange rate management, rate syncing, discount management, and approved UPI handle validation.
- Implemented comprehensive reporting features including branch-wise and consolidated transaction reports, and customer-level reports for audit and operations.
- Developed role management functionality to control branch-level access and permissions across the platform.

ACHIEVEMENTS & ACTIVITIES

- Participated in an AI-themed Hackathon at Vofox Solutions, contributing to AI-driven prototype development and solution design.
- Served on the Central Committee at Vofox Solutions — planning and coordinating social events, sports activities, and company-wide entertainment programmes.

EDUCATION

B.Tech in Computer Science

Graduated August 2020

Nirmala College of Engineering, Chalakudy, Kerala
